Abstract (en)

[origin: WO2010119101A1] The invention relates to a transverse web for connecting two side parts of an element of a line guiding device, comprising a toggle lever closure (2) having an actuating part (3) and a locking part (4), wherein the actuating part (3) can be swiveled from the locking position completely to the unlocking position in one step by means of a tool (B), and wherein in an engagement area (10) at a distance to the free end (8) of the actuating part (3) and to the swivel axis (axes), a lateral recess (11) for engaging the tool (W) in the transverse web (1) and for applying a force by means of the tool (W) with at least one force component in the direction of the swivel motion of the actuating part (3) to the unlocking position thereof is provided, wherein the recess (11) is laterally delimited by the opening edge (12) of the opening (9) and the actuating part (3).
