Abstract (en)

[origin: WO2010119125A1] The invention relates to a system (1) for making an application available on a user terminal, comprising a user terminal (5) that is connectable to an interface (6) for selecting the application from among a plurality of virtual applications (2, 3, 4), at least one first physical server (7) divided into a plurality of virtual machines (8, 9, 10, 11), a means (12) for storing a plurality of virtual applications (2, 3, 4), wherein selecting the application causes the corresponding virtual application to be loaded and run on an unused virtual machine (8, 9, 10, 11) from among the plurality of virtual machines (8, 9, 10, 11) of the first physical server (7), each virtual machine (8, 9, 10, 11) being capable of loading and running a single application, a second warehousing physical server (13), a means (14) for transferring the display of the application run by the virtual machine to the second server (13) and a means (15) for transferring the display of the second server (13) to the user terminal (5).
