Abstract (en)

[origin: WO2010119015A1] The invention relates to a packaging device (2) for transporting and/or warehousing radioactive products releasing inflammable and/or explosive gases by radiolysis, including canisters (8) for containing the radioactive products, each canister defining an inner storage space that can be accessed via a fill opening, and on which caps (14) are mounted. According to the invention, the device also comprises a structure (10) forming a chamber (12), as well as a communicating means enabling "fluid" communication to be established between the inner storage space and the chamber (12).
