Abstract (en)

[origin: EP2420165A2] The adjustment mechanism is adjustable in the absence of a child, where a lever system is provided for adjustment of two pairs of arcuate support members (5). A handle element of the lever system engages into an opening of a child seat (2) for adjustment of the two pairs of arcuate support members. The handle element is connected to a fastening element (12) locked in a specific position. An independent claim is also included for a multi-functional chair for children.
