Abstract (en)
[origin: EP2420174A2] The dishwasher has a control unit for executing a rinse cycle for cleaning items to be washed on the basis of a selectable rinsing program. A rinsing program is selected, in which an automatic execution of the pump down sequence (A) takes place. The pump down sequence includes three pump down phases (AP-1,AP-2,AP-3). An independent claim is also included for a method for operating a dishwasher, particularly domestic dishwasher.
