Abstract (en)

[origin: EP2420175A2] The dishwasher has a control device for storing a rinsing program for executing rinsing cycles (SG, SG') to clean and/or dry goods to be washed, and an operating device for inputting operating commands for the control device. One of the commands is inputted at the operating device for executing measures for adapting the rinsing program to the goods. The measures control prevention of stains in the goods and/or drying results of the goods based on the adapted rinsing program during execution of the rinsing cycles. An independent claim is also included for a method for operating a dishwasher.
