Abstract (en)

The invention relates to a chalk line device (1) comprising a retracting device (5) which is linked to a spool (4) via a set of gears (9), and a chalk line which is attached to said spool (4) and which may either be coiled onto said spool (4) or uncoiled from said spool (4). Said set of gears (9) and said spool (4) being rotatably disposed inside a housing (2a, 2b) to rewind the uncoiled chalk line when said retracting device (5) transmits a force onto said spool (4) via said set of gears (9). When said spool (4) is exposed to a torque which exceeds a threshold value, at least one force transmitting link between said retracting device (5) and said spool (4) disconnects.
