Abstract (en)

[origin: EP2420389A1] The invention relates to a chalk line device (1), comprising a housing (2a, 2b), a spool (4) which is rotatably arranged inside the housing (2a, 2b), a chalk line which is attached to said spool (4) and which may either be coiled onto or uncoiled from said spool (4), a first outlet defining part (8) and a second outlet defining part (9), which together define an outlet (3) through which said chalk line protrudes, wherein said first outlet (3) defining part (8) extends a distance from said outlet (3) in a direction towards the opposite end of the chalk line device (1) and said distance is shorter than the distance between said outlet (3) and said opposite end of the chalk line device (1), and wherein said first outlet defining part (8) is reconnectably arranged to said second outlet defining part (9) allowing said outlet (3) to be accessible when said first outlet defining part (8) is at least partly separated from said second outlet defining part (9) in order to arrange said chalk line in said outlet (3).
