Abstract (en)

[origin: EP2420440A1] The device has a flexible link (20) e.g. cable, with an end (21) connected to a marine or submarine vehicle (80). A coil (30) is connected to another end (22) of the flexible link. The flexible link is wound around the coil, and a ballasting load (50) is associated to the coil. The flexible link and the coil are cooperated such that the coil is released from the load by unwinding the flexible link wound around the coil. The flexible link carries a stopper (71) between the ends of the flexible link. An independent claim is also included for a marine or submarine vehicle comprising a remote controllable releasing system.
