Abstract (en)

[origin: WO2010121319A1] A device for removing excess fluid from a sponge board comprising a substantially planar surface with a layer of absorbent material applied to one side, the device including an elongate roller having a first substantially horizontal rotational axis; a pair of guide rollers arranged along a second rotational axis which is substantially parallel to the first rotational axis and spaced apart from the elongate roller; and a pair of brackets arranged in opposed relation to support the elongate roller and guide rollers there between; wherein the device is configured to be mounted on the rim of a bucket.
