Abstract (en)  
[origin: WO2010123858A2] A unified imaging platform is disclosed. The unified imaging platform can be adapted for use with a variety of medical imaging devices. The unified medical imaging platform can include a display, a processor, a data storage device and one or more external interfaces. The unified imaging platform can be removably coupled to a medical imaging device such as an endoscope. The unified imaging platform can be coupled to the medical imaging device via a wired or wireless link. Using web services, the unified imaging platform can also transfer image data to other devices including a local desktop computer system, a mobile device and/or a remote system.
