Abstract (en)
[origin: WO2010121302A1] A surgical screw fastener device and method for pulling a graft through a first tunnel defined in a first bone. The surgical screw fastener including a body having a proximal end and a distal end, and an exterior screw thread located around the body for threadedly engaging a wall of the first tunnel. The device can have a first coupling element at the proximal end of the body, wherein the first coupling element adapted to couple a driver tool. The device can further have a second coupling element for rotatable coupling of a first end of the graft with respect to the device.
