Abstract (en)
[origin: CA2759823A1] The invention relates to a method and to a device for producing packages (10) for cigarettes, having a continuously driven conveying means (32), particularly a transport belt (42) comprising a pusher (43), for transporting the packages (10), and having a device (31) for applying print substrates such as banderoles (26), coupons, or the like to a side face of the packages (10), wherein the device (31) for applying the print substrates is disposed in the area of the conveying means (32) for applying the print substrates to a side face of the packages (10) facing the device (31) during transport along the conveying means (32). According to the invention, a pivot device (30) for changing the relative position of the packages (10) is disposed in the area of the conveying means (32) or of the device (31) for applying the print substrate, wherein the pivot device (30) is set up for receiving one package (10) each in a relative position corresponding to transport on the conveying means (32), and rotating the package (10) into a relative position suitable for applying the print substrate, and further rotating the package (10) into a relative position corresponding to further transport on the conveying means (32).
