Abstract (en)

[origin: WO2010122076A1] According to the invention, it was recognized that the fiber products, in particular, glass fiber products, suitable for thermal insulation can be temporarily given an inherently stable shape by fixing agents that can be activated. This enables the fiber molded parts produced from the fiber products according to the invention to be used more easily or fully automatically. Processing the fiber products to form a molded part becomes exceptionally simple if said product itself carries the fixing agents. Therefore, a fixing agent does not have to be added in a separate production step during the molding.
