Abstract (en)  
[origin: CA2759150A1] The invention relates to a method for erecting a tower for a wind power installation, and to a tower for a wind power installation. A coating is at least partially applied to the outer surface of the tower in such a way that it absorbs tensile stresses acting on the outer surface of the tower, and the coating seals the outer surface of the tower against environmental influences, especially humidity, that act on the exterior of the surface.
