Abstract (en)
[origin: WO2010121732A2] The invention relates to a tower for a wind power installation, the walls of the tower at least partially consisting of individual wall sections that are interconnected by connection means. The aim of the invention is to provide a tower for a wind power installation, that can be assembled with adequate precision, and to provide a method for erecting such a tower. To this end, an empty framework to which the wall sections can be secured is at least partially provided inside the tower.
