Abstract (en)

[origin: WO2010121948A1] The invention relates to a lighting module (100), in particular for a motor vehicle, including: a first concave reflector (102) including a first and second focal point; a second concave reflector (103) including a first and second focal point, the first (102) and second (103) reflectors having a truncated perimeter such that the reflecting surface of the first reflector (102) is pointed towards that of the second reflector (103); a mask (108) between the first (102) and second (103) reflectors; an optical element (120) including a first focal point located in a plane perpendicular to the optical axis of the module and passing through the cutting edge; said cutting edge (109) being located level with the second focal point (113) of the first reflector and level with the second focal point (113) of the second reflector.
