Abstract (en)

[origin: WO2010121951A1] The invention proposes an automated teller machine (ATM) comprising a control panel (CP) having elements (1, 2, 3, 4, 5) arranged therein, said elements being available to the user of the automated teller machine (ATM), and having a camera (CAM) to detect manipulation attempts on the automated teller machine (ATM). The camera (CAM) is mounted inside a housing section of the automated teller machine (ATM), said housing section surrounding the control panel (CP), and is oriented in such a way that the camera (CAM) captures images of at least two of the elements (1, 2) arranged in the control panel (CP). In particular, the camera (CAM) captures images of the money-dispensing compartment (1) and the keyboard (2) in order to unequivocally detect potentially installed superstructures or similar manipulation or skimming attempts.
