Abstract (en)

[origin: WO2010122153A1] The invention relates to a method and a device for introducing and removing substrates. Substrates (5) are transported into a lock (2) by a transport device (4). A collection container (3) is located in said lock below the substrates (5) for collecting possible substrate fragments (19). The substrates (5) are removed together with the collection container (3) and the lock cover (18) once the lock (2) has been flooded, the lock cover (18) and the collection container (3) forming an almost closed box around the substrates (5). Once the substrates (5) are replaced and the collection container (3) is evacuated, the new substrates (5) are introduced together with the collection container. All the steps are carried out in the machine cycle to ensure an effective production process.
