Abstract (en)

[origin: WO2010121726A1] The invention relates to an electric terminal for leading a conductor through a wall (1), comprising a first terminal piece (2) to be mounted on a first side (3) of the wall (1), and a second terminal piece (4) to be mounted on the second side (5) of the wall (1). The second terminal piece (4) or the first terminal piece (2) can be fastened to the wall (1) using a fastening means (6) that can be inserted through the wall (1) into the first terminal piece (2) or the second terminal piece (4) from the first side (3) or the second side (5) of the wall (1), and/or the fastening means (6) can be interlocked with the second terminal piece (4) or the first terminal piece (2) in such a way that the second terminal piece (4) or the first terminal piece (2) can be fastened to the wall (1) from the second side (5) or the first side (3) of the wall (1). According to the invention, such an electric terminal for leading a conductor through a wall (1) can be fastened to the wall (1) in a particularly simple fashion.
