Abstract (en)
[origin: EP2423116A2] The package has a retaining section (6) for fitting an article (4a) to be packed, and a blade section (2a, 2b) rotated in relation to the retaining section. A laminar fixing element (1) is clamped during rotation of the blade section. Another laminar fixing element is arranged between the former fixing element and the retaining section. The latter fixing element is clamped during rotation of the blade section, so the article lying on the retaining section is fixed. The fixing elements are formed as flexible foils.
