Abstract (en)

[origin: EP2423123A1] The bottle (1) has a circumferential circular sealing edge (2) along which a multi-layered cover region (3) is adhered after a tamper-proof seal is peeled out. The cover region has a separation line (9) arranged eccentric to a circle center. An outer layer is connected with the cover region in a peelable manner, where the cover region is provided with a flap area (4). The separation line has a concave section formed in the flap area in a region lying next to the sealing edge. The flap area is limited by two end points (6, 7) of the separation line and a bending line (8) between the end points.
