Abstract (en)

[origin: EP2423795A2] A mobile terminal and controlling method thereof are disclosed. The present invention includes displaying a 3D user interface including at least one 3D object on a display unit, selecting at least one stereoscopic region from the 3D user interface by a first input via a user input unit, displaying at least one polyhedron corresponding to each of the selected at least one region on the display unit, and changing a display state of each of the at least one polyhedron to correspond to a second input via the user input unit, wherein the step of changing the display state is performed to enlarge, reduce, rotate or scroll the at least one polyhedron according to the second input. Accordingly, the present invention provides a 3D user interface using a 3D object arranged in a virtual 3D space, thereby facilitating a user to manipulate a mobile terminal with a new visual effect.
