Abstract (en)

[origin: WO2010142375A1] The invention relates to a treatment device for food products into which treatment device a conditioning device is integrated, said conditioning device having a shaping element that comprises at least one shaping element having a pressure surface and being capable of shaping a food product by means of said pressure surface according to a cross-sectional shape defined by the pressure surface, the pressure surface being cooled. The treatment device is a cutting device, especially a high-performance slicer, comprising a cutting unit which has a rotating cutting knife and/or a cutting knife that revolves in a cutting plane, and a driven product feed which feeds a food product to the cutting unit, the conditioning device being mounted upstream of the cutting unit.
