Abstract (en)
[origin: WO2010124864A2] A closure part, particularly for forming hermaphroditic closures, having at least one carrier band (16), which has a web shape, comprises at least one pair of surface regions (17a, 17b) arranged opposite of each other, and which can be connected at least partially along a connecting region (19) to a main body (26) as third component, and comprises individual closure bodies (2) at least in part of the surface regions (17a, 17b) that are located outside of the connecting region (19) and adjacent thereto, which bodies protrude from the carrier band (16) and form a fixing feature (24) for further closure parts of the same or different kinds.
