Abstract (en)
[origin: WO2010125045A1] The invention relates to a funeral item for identifying and perpetuating the memory of a deceased person in a timeless fashion, made of an inalterable material, including: on the one hand, an element (1) marked with a unique code assigned to said deceased person, and, on the other hand, a pair of plates (3, 4) held together by an attachment means, both of which are marked with said unique code, the second plate comprising data for identifying said deceased person in natural language, such as to form a device for identification and remembrance. The marked element (1) is available as soon as the funeral services take charge of the deceased person, while the plates (3, 4) are made after inhumation or cremation and subsequently joined together in order definitively to form the item for remembrance and identification of the deceased person. The invention also relates to a kit and to a method for producing said funeral item for identification and remembrance.
