Abstract (en)

[origin: WO2010125461A1] A vaccine containing a H1 subtype influenza A virus hemagglutinin is adjuvanted with an oil-in- water emulsion adjuvant. The vaccine is suitable for immunizing a patient against the virus referred to as 'swine flu'. The vaccine may be monovalent. The vaccine may include two different H1 subtype influenza A virus hemagglutinins, wherein (i) the first H1 subtype influenza A virus hemagglutinin is more closely related to SEQ ID NO: 1 than to SEQ ID NO: 3 and (ii) the second H1 subtype influenza A virus hemagglutinin is more closely related to SEQ ID NO: 3 than to SEQ ID NO: 1. A monovalent vaccine may be administered in conjunction with a trivalent A/H1N1-A/H3N2- B seasonal influenza vaccine.
