Abstract (en)

[origin: WO2010127820A1] The invention relates to a spray bar, a path and a method for applying a medium onto a product, in particular in hot strip mills, CSP facilities or other strip processing lines. The spray bar (1) used therefor comprises a housing (2) with outlet openings (3) from which the medium can be applied onto the product. To this end, the outlet openings (3) can be covered in a sealing manner or can be released by a pivotable cover (4) which is formed by at least one segment of a hollow cylinder and which is arranged on at least one of the two ends of the housing. In this way, no medium is conducted onto edge regions which are not to be treated and, simultaneously, an accurate adjustability of the treatment is ensured.
