Abstract (en)
[origin: WO2010125269A1] The invention relates to an axle system (1) for an automobile including two longitudinal control arms (2) and one elongate crossbeam (3) with each one of the two ends thereof inserted into one of the arms (2), characterised in that a binding material is arranged between the crossbeam (3) and each arm (2) so as to secure the crossbeam (3) to the two arms (2), and in that the binding material enables each arm (2) to rotate about the longitudinal axis of the crossbeam (3) in the operational configuration of the axle system (1).
