Abstract (en)
[origin: WO2010127648A1] The invention relates to a packaging unit of an insulating material product (2), particularly of a high-temperature insulation wool preferably made of a mineral, fibrous raw material, comprising an envelope made of a film (6) or the like. In order to create a packaging unit (1) which requires considerably less space during transport and storage without destroying the inner fiber structure, saving enormous costs in particular during transport, the elongated insulating material product (2) is wound into a bale (3) having straight long sections (4) and round short sections (5).
