Abstract (en)

[origin: WO2010125317A1] The invention relates to a client-server method for use in the domain of networks for mobiles. The method according to the invention comprises a client application housed in a "smart phone" in a mobile network, and a server application housed in a service server. Advantageously, in order to acquire a service via a data channel, the client application authenticates itself with the operator of the mobile network via a signalling channel. The service acquisition cost is billed by the operator who also manages the phone usage of the "smart phone". A premium-rate SMS can be used for billing. The invention also relates to a system and a terminal comprising functionalities for implementing the method according to the invention.
