Abstract (en)
[origin: WO2010125318A1] The invention relates to a client-server method in the domain of networks for mobiles. The method according to the invention comprises a client application housed in a "smart phone" in a mobile network, and a server application housed in a services server. Provision is made for a request for the suspension or activation of the service and an authentication of the user of the "smart phone" with the operator of the mobile network via a signalling channel. The invention also relates to a system and a terminal comprising functionalities for implementing the method according to the invention.
