Abstract (en)

[origin: WO2010124915A1] A light emitting diode is disclosed, comprising a semiconductor body (1), wherein the semiconductor body (1) comprises an active region (11) provided for producing radiation, a carrier body (2), which is fastened to the semiconductor body (1) on an upper side (1a) of the semiconductor body (1), wherein the carrier body (2) comprises a luminescence conversion material, a mirror layer (3), which is applied to the semiconductor body (1) on an underside (1b) of the semiconductor body (1) facing away from the upper side (1a), and two contact layers (4a, 4b), wherein a first (4a) contact layer is connected to an n-conducting region (13) of the semiconductor body (1), and a second contact layer (4b) is connected to a p-conducting region (12) of the semiconductor body (1) in an electrically conductive manner.
