Abstract (en)

[origin: WO2010124771A1] The invention relates to an adapting element for serial data transfer in a motor vehicle. Said element comprises a first housing part (1) that can be connected to a shield and a second housing part (2) comprising at least one contact element (2.1). The two housing parts (1, 2) are disposed so that the second housing part (2) is enclosed by the first housing part (1) in an area (A). The at least one contact element (2.1) has electrical contact to the first housing part (1) in the area (A), wherein the adapter element is configured so that access from outside is ensured for producing the contact. The second housing part (2) is enclosed by the first housing part (1) within a further area (U) also extending along the longitudinal axis (X) of the adapter element on both sides of the first housing element (1).
