Abstract (en)
[origin: EP2425739A2] The belt (1) has flat belt parts (2, 3) connected with each other such that one of the belt parts is rotated opposite to the other belt part. Free ends of the belt parts are connected with closures (5). A carrying case (6) is fixed to the former belt part in a rotary region of the belt parts and opened at a part of one of the closures. The latter belt part is inserted between the former belt part and the carrying case. The carrying case is adapted on housing shape of a camera (7) or binoculars, and a slot-shaped recess (9) is adapted at outer diameter of a camera-objective (8).
