Abstract (en)

[origin: EP2425747A1] The device (B) developed according to the present invention comprises at least one main body (1) provided with at least one orifice (1a) at the lower surface (1c) thereof; at least one adjustment bar (2a) provided with at least one protrusion (2a) and attached to the orifice (1a) on the body; a kick plate (A), comprising at least one connection part (4) provided with at least one adjustment orifice (4c) and extending inward from said body (1); at least one recess (5) into which said connection part (4) is introduced; and at least one locking element (4d) restricting the forward/backward movement (in the direction of +Z/-Z) of the kick plate (A). According to the device (B) developed, the height of the kick plate (A) is changed by means of an adjustment bar (2) and the position of the kick plate (A) in the forward/backward (+Z/-Z) direction is adjusted and thus fixed to the device (B).
