Abstract (en)  
[origin: EP2426408A1] The arrangement has a housing with an aperture for outputting light along a main beam direction. Fluorescent tubes (11, 21) are arranged adjacent to each other along the main beam direction. The fluorescent tubes are overlapped with respect to each other along length for about overlap length, where the overlap length is continuously adjusted by displacing the fluorescent tubes against each other. The fluorescent tubes are arranged adjacent to a longitudinal axis of the housing than to an exterior wall of the housing in instrument carriers (10, 20).
