Abstract (en)

[origin: EP2426413A2] The device (10) has a gas valve positioned in a housing (11) for influencing gas flow from the device. The housing has a wall (12) comprising a gas outlet opening (13) via which a gas stream of a venturi nozzle (14) is supplied, where the gas stream is mixed with air flow for providing a gas-combustion air-mixture. An accommodator (19) for two venturi nozzle parts (17, 18) is formed at the housing as an integral component of the housing, where the nozzle parts form inlet and outlet hoppers of the nozzle, respectively. The accommodator is formed by casting a metallic material i.e. aluminum.
