Abstract (en)  
[origin: EP2426441A2] The cooling device (S) of the present invention comprises at least one air compartment (15) in the device (S), into which one sides of air transfer channels (7a, 7b) open; at least one blown air channel (8a) located between the evaporator (4) outlet and air compartment (15); at least one returning air channel (9b) located between the air compartment (15) and evaporator (4) inlet; at least one air directing unit (16) located within the said compartment (15), which is movable periodically between the first section (15a) where one (7a) of the air transfer channels (7a, 7b) open into the compartment (15) and the second section (15b) where the other channel (7b) opens into the said compartment (15).
