Abstract (en)
[origin: EP2426445A2] The apparatus (1) has a heat-insulating inner container (3) comprising a coolable inner space (4) that is cooled by a refrigerant circuit. The refrigerant circuit comprises a condenser i.e. wire tube condenser, arranged outside of the inner container, and an ion wind blower is designed to generate suction airflow that moves heat, generated partially by the condenser, into surrounding area of the apparatus. The condenser is designed as a statically cooled heat exchanger. The blower is arranged above the condenser and designed as a pulsed plasma actuator.
