Abstract (en)

[origin: WO2010127861A2] A rotary press, in particular for the production of tablets, has a rotationally driven rotor and at least one pressure roller unit, which is releasably attached to a support device, in particular at least one support plate, by means of a holding device. According to the invention, multiple similar holding devices are arranged on the support device, wherein the pressure roller unit may be alternatively attached to one of the holding devices and/or transferred between the same.
