Abstract (en)

[origin: WO2010128468A1] A child' s seat for transporting a child in a vehicle comprises a base (2) provided with fastening means for fastening the base (2) to a vehicle seat such that the child is facing forwards in an advancement direction of the vehicle, a receiving element (3) suitable for receiving the child, a hydraulic shock-absorber (16) interposed between the base (2) and the receiving element (3) such as to be activated when the vehicle is subjected to an impact in order to modify the inclination of the receiving element (3) with respect to the base (2) by displacing the receiving element (3) from a less-reclined normal working configuration to a more-reclined impact configuration, the seat (1) further comprising an adjusting device for adjusting the inclination of the receiving element (3) with respect to the base (2) in the normal working configuration, the hydraulic shock-absorber (16) having a first end which is connected to the base (2) and a second end which is connected to the adjusting device.
