Abstract (en)
[origin: WO2010127466A1] The running gear (1) for a sliding door comprises a running gear holder (15) for at least one pair of rollers (17), and a mounting housing (13), within which a spindle (27) is retained so as to be axially immovable while meshing with a threaded bore (47) in the running gear holder (15). The vertical position between the sliding door (5) and the top of the cabinet can be adjusted by changing the distance between the mounting housing (13) and the running gear holder (15) as the control gear (29) is rotated.
