Abstract (en)

[origin: WO2010127748A1] The invention relates to an exhaust gas routing device for an internal combustion engine (10) having a thermoelectrical generator, fluidically connected to an exhaust gas tract (2) and to a line (11') guiding a coolant, wherein the generator comprises a plurality of thermoelectrical yoke pairs (18) disposed between a first surface (21) heated by the exhaust gas and a second surface (20) cooled by the coolant, and the exhaust gas routing device comprises a device (22) guiding the exhaust gas along the first surface (21) at a flow speed increasing in the flow direction of the exhaust gas.
