Abstract (en)
[origin: EP2428340A1] The device has an upper part (20) movably arranged above a base (1), and an adjusting mechanism for adjusting a position of the upper part relative to an adhesive agent transferring tool i.e. gluing roller (100), provided at the base. A driving mechanism i.e. servomotor (40), adjusts a stop to define a set of working positions of the upper part relative to the tool. Another driving mechanism i.e. pressure cylinder (42), adjusts the upper part relative to the tool from a base position to one of the working positions defined by the stop. An independent claim is also included for a method for operating an upper part of an adhesive agent supplying device.
