Abstract (en)
[origin: EP2428600A1] A yarn guide apparatus for offset knitting is provided that enables a knitting needle to reliably receive all filaments constituting a yarn at a knitting point even in offset yarn feeding, and enables a yarn to be stably fed without coming off the knitting point due to a change in the knit structure or the like. The yarn guide apparatus feeds a yarn to a knitting needle from a position offset from the movement line of the knitting needle in a knitting machine. The apparatus includes a yarn guide apparatus main body that is provided with a yarn inlet and a yarn outlet, and a guide plate that is disposed at a lower side portion of the yarn guide apparatus main body. A yarn that has been pushed into a knitting needle is guided by the guide plate up to a position immediately before a knitting point.
