Abstract (en)

[origin: EP2428623A2] The unit has a rigid tubular telescopic suction tube (16) secured to a grip delimited by sides of a body (10) in advanced and removed positions. The tube is moved between the positions through a single translation movement (F1) along a main axis (A). The tube is formed of cylindrical drums (18-1, 18-2), where one of the drums is retracted into the other drum in the removed position, and the drums are housed in the body. The former drum is folded with respect to the latter drum in the advanced position. An independent claim is also included for a method for implementing a mobile waste collection unit.
