Abstract (en)

[origin: WO2010130501A1] The collar for animals, in particular dogs, has a fastener which is designed as a click lock and has a housing (20) and a locking tongue (22). The housing (20) and locking tongue (22) can be plugged in in a plug-in direction (24). The housing (20) and the locking tongue (22) each have an end piece (46). A lead can be releasably fastened to a lead ring (26). A neck part (28) can be connected to the fastener to form a ring; said neck part has two connecting regions (42), each of which is connected to an end piece (46). A bearing opening (64) is formed in the fastener, the bearing opening having an axis line which runs transversely with respect to the plug-in direction (24) and substantially parallel to a central axis (66) of the collar. The lead ring (26) is held pivotably in the bearing opening (64).
