Abstract (en)

[origin: WO2010132626A1] A backing plate for a buffing pad is comprised of a substantially circular disc having first and second surfaces that are adapted to be connected to the nonworking faces of first and second buffing media to form a two-sided buffing pad. The disc has a central hub with an axial opening therein that is adapted to connect the plate to a shaft of a power buffer. The opening is essentially hexagonally shaped in that it is formed of six straight walls. The ends of adjacent walls are spaced apart from each other by circular recesses and do not directly connect to each other.
