Abstract (en)

[origin: WO2010130712A1] The present invention relates to the usage of micro-organisms to accelerate carbonation and to increase the compressive strength of non-hydraulic lime mortars. The micro-organisms of the present invention metabolize nutrients within the mortars in order to produce CO₂ which results in accelerated CaCO₃ formation and hence increased strength of the mortar. The invention further encompasses non-hydraulic lime mortars comprising micro-organisms and relates to a process to fabricate such lime mortars.
